Corpus Linguistics for Language Learning Research

Pascual Pérez-Paredes, Geraldine Mark and Anne O'Keeffe
University of Murcia / MIC, University of Limerick / MIC. University of Limerick

This book serves as an introduction to corpus linguistics (CL) for graduate students and researchers in Applied Linguistics, especially in the domains of language learning and teaching. It provides a structured and accessible approach for those new to CL, equipping readers with the foundational concepts and tools required to analyse language corpora autonomously in research related to language learning and teaching. It also contextualises CL's development over the past four decades, offering critical reflections on its practices and applications. Each chapter integrates recommended readings and highlights central concepts, guiding readers in applying CL methods to their own studies. By the end of the book, readers will have gained the knowledge and practical expertise needed to apply corpus linguistics methods in conducting robust and innovative research.

Foreword
Introduction: Aims and structure of the book

Part 1. Corpus linguistics for language learning research: Global considerations
Chapter 1. Key concepts
Chapter 2. The basics: Key functions of using a corpus
Chapter 3. Corpus types and research perspectives

Part 2. Units of analysis in learner language research
Chapter 4. Researching word classes using corpora and POS tagging
Chapter 5. Researching phraseology: Collocations
Chapter 6. Researching grammatical patterning

Part 3. Researching corpus applications in language learning and teaching
Chapter 7. Researching indirect uses of corpora for language teaching and learning
Chapter 8. Researching direct uses of corpora for language teaching and learning
